

Good Sense Variety Pack

Cartridges for Good Sense Automatic Dispenser

Good Sense Variety Pack

- Adjustable Settings
- Unique Propellant System
- Contains Odour Neutralising Technology
- 1 Refill lasts 53 Days

Adjustable Settings

The Good Sense Automatic System has adjustable settings so that the dispenser can be programmed to deliver just the right amount of fragrance based on the needs of the customer. There are three setting levels: High, Medium and Low. These coupled with the addition of the photocell mean that optimum cost in use is delivered in line with perfect ambience.

Unique Propellant System

The Good Sense Automatic System has a unique propellant methods which means that it delivers finer particles of fragrance in the air compared with standard propellant aerosols. As the particles are finer they are dispersed easier into the air and stay in the air for longer.

Good Sense Variety Pack

Contains Odour Neutralising Technology

Most odour control products simply contain a fragrance to mask the malodours generated throughout your premises. Odour Neutralising Technology unlike conventional deodourisers chemically destroys the malodour molecules and enhances the perfume of the product. Odour Neutralising Technology therefore means that you do not need as much perfume or fragrance. This technology is patent protected and is chemically proven and can be demostarted.

Refill Cartridges for GoodSense Automatic

Understanding ONT

What is the chemical reaction with malodours?

By mixing two different classes of aldehydes, the ability to abate malodours is dramatically increased. They react with the malodour molecules and transform them into odourless molecules.

Can the technology destroy all malodour types?

The technology has sufficient pairs of actives to destroy most common types of malodours.

How long does the technology last in practice?

In practice, as long as you can smell the perfume the ONT is working. In a hotel room treated with a product containing ONT, the perfume was still noticeable after 8 hours.

Can the technology be incorporated in all air care products?

ONT is used in all GoodSense products, whether instant, liquid cleaner or continuous action.

Can you prove that the technology is effectively destroying malodours?

ONT is not just a claim, it is proven patented technology which can be chemically proven.

Why is the technology helpful as a responsible solution?

The malodours are chemically destroyed, the perception of the perfume is enhanced meaning that a large of product is not required to leave a pleasant fragrance.

Pack Details

Product code: 7513079

Pack size: 2 x 6 x 20ml

Cases per layer: 82

Cases per pallet: 902

Selling bar code: 7515400042050

Piece bar code: 7615400042067

The following other Refills are available for use with Good Sense Automatic:

Good Sense Crusair: 7513075

Good Sense Vert: 7513292

Good Sense Mimosa & Magnolia: 7513063

Good Sense Toscane: 7513071

Good Sense Summer Festival: 7513067

Good Sense Automatic Dispenser: J048060
